Abstract (en)
[origin: WO2004110643A1] The invention relates to a device for the separate preservation and storage and for the separate and/or at least semi-combined discharge of individual components, such as viscous and/or pulverulent media. Said device comprises at least one discharge organ (15) for the media (3, 5, 7), enabling the individual, simultaneously separate and/or mixed discharge of one or more component(s) or media. Said components or media can be arranged in respective separate compartments (3, 5, 7), or in a common container (10), in which the components or media are stored and preserved in their own separate compartments (3, 5, 7).
