Abstract (en)
[origin: WO2005007312A1] The invention concerns a device for pulling out dents on steel plates, said device comprising a fixing elements (1), whereof the legs (8, 9) press on the steel plate outside the dent. Facing the fixing element is a mobile tensile element (3) for pulling out the dent. In order to locate the support element as close as possible to the dent, the legs can be moved about an axis transverse to the tensile direction.
