Abstract (en)
[origin: WO2005007431A2] The invention relates to a door arrangement (1), for closing an entrance opening (4) of a motor vehicle, comprising a first swinging-sliding door (2), provided for a first opening region (12) and a second swinging-sliding door (3), provided for a second opening region (13). In a closed state, both swinging-sliding doors (2, 3) are arranged in a first plane (14), in which a lateral wall (8), adjacent to the entrance opening (4), is also arranged. In the open state, the first swinging-sliding door (2) is arranged in a second plane (15), parallel to and offset to the outside of the first plane (14) and is also outside of the lateral wall (8), next to the first opening region (12). In the open state, the second swinging-sliding door (3) is arranged in a third plane (16), parallel to and offset to the outside of the second plane (15) and also arranged to the outside of the lateral wall (8), next to the first opening region (12).
