Abstract (en)

[origin: FR2857625A1] The vehicle comprises a compartment with seats (55) located in the compartment rear and a storage space located behind the seats. The vehicle roof has an opening closed by a retractable roof comprising two rigid movable parts (1,3,5,9). The roof parts are connected to first displacement elements (7,37) during their frontward displacement and a rearward folded displacement where they are retracted behind the seats. There are second displacement elements which engage roof parts for displacing if necessary these roof parts to a second storage position. An independent claim is included for a method of storing the retractable roof.
