Abstract (en)
[origin: WO2005005714A1] Method characterised in that it involves the steps of preparing plastic material comprising granulate of a single polymeric component of the polyolefin group, and at least 0.2% of UV stabiliser, extruding the continuous filament wrap yarn and the continuous filament weft yarn, weaving the continuous filament warp yarns and the continuous filament weft yarns with a density over 16 warp yarns per centimetre and 10 weft yarns per centimetre, and treating the fabric by immersion with a water-proof product. Fabric obtained by the method of the present invention are very suitable for manufacturing awnings and similar materials since they have, at the same time, an optimum resistance to wetting, water penetration and bleaching caused by sunlight.
