Abstract (en)
[origin: GB2401900A] A method of forming a precursor 300 for a door, window or panel, in which a first skin 304 is attached to a first surface of an open cell foam 302 and a second skin (not shown) is attached to the precursor in a separate step. The second skin may be attached by an adhesive to a second, opposing surface of the open cell foam 302. Prior to attaching the second skin the precursor may be, for example, trimmed or varnished, may be adapted to receive one or more pieces of glazing and may also be modified to receive one or more fittings, for example a handle. Also included is a door, window or panel including a foam core which has a layer of adhesive therein.
