Abstract (en)

[origin: WO2005008390A2] A system, method, and computer program product for allowing persons to scan and archive electronic versions of paper documents at any automated transaction machine. The electronic documents are then archived on a server in a central repository, preferably managed by the bank itself, and/or returned to the user via email or on a removable medium such as a disk, CDROM, or non-volatile memory. In this way, individuals can conveniently enjoy the benefits of electronic document archival, without the expense of purchasing the required hardware or software themselves. Other embodiments allow the user to retrieve and print archived documents.
