Abstract (en)
[origin: WO2005008693A1] The invention relates to a magnetizing device comprising at least one support (2) which is made of an insulating material, is arranged across from the surface of a body that is to be magnetized, and is provided with at least one current conductor (4) on the side (3, 5) facing the body that is to be magnetized, the geometric arrangement of said current conductor (4) on the support surface (3, 5) corresponding to the desired number of poles and pole arrangement of the body that is to be magnetized. According to the invention, the insulating material is filled with particles containing magnetic material so as to increase the magnetic flow.
