Abstract (en)

The device has a center section (12) that is stationary or fixably mounted relative to a longitudinal guidance unit (2). The center section couples front and rear sliders (8, 11) with one another in such a manner that the sliders are relocatable only in opposite directions in the longitudinal guidance unit relative to the center section. Steering rods that are firmly arranged in the slider (8) are adjustably locked at the slider (11).
