Abstract (en)

The method involves forming a circumferential label of rigid cardboard material to present front and back edges. The label is brought closer with its front edge to a lateral surface of a container, where the label is attached to the container by gluing. The label is wrapped upon circumference of the container. The back edge is attached to a lateral surface joint on joint with the front edge by gluing in a lying position. An independent claim is also included for a device for equipping containers with a circumferential label.
