Abstract (en)
The engine has a connecting structure (20) placed between a compression unit (10) and an expansion unit (30). The structure has an air inlet area (23) for receiving compressed air from the compression unit, and a gas outlet area (24) for transferring gas to the expansion unit (30). The structure includes a gas volume which is delimited by the unit (10) in the area (23) and by the unit (30) in the area (24). An independent claim is also included for a power generating method .
