Abstract (en)
The crystal has a convex upper face (10) and a concave lower face (12), each presenting a bend radius (RS1, RI1), along 12 hours-6 hours axis, and another bend radius, along 3 hours-9 hours axis. The radiuses are such that the crystal has a constant thickness (e). The crystal is in rectangular, oval or barrel form, and is made of a hard crystalline transparent mineral material such as sapphire, spinel or ruby. An independent claim is also included for equipment for multipart machining of the convex upper face of a watch crystal.
