Abstract (en)

[origin: EP1646113A2] A cable connector (1) according to the invention includes: contacts (3) connected to core conductors (a) of coaxial cables (2), an insulating member (6) for holding the contacts, a plate-shaped grounding bar (7) put across the coaxial cables and soldered to shielding external conductors of the coaxial cables (2); and substantially flat-plate-shaped metal upper and lower shells (4 and 5) enclosing the insulating member (6) from above and below to be fixed to the insulating member, the grounding bar (7) being electrically conducted to the upper shell (4) and the lower shell (5). Supporting means (4i and/or 5e) abutting against a back end surface of the grounding bar (7) is provided on at least one of flat plate parts (4e, 5a) of the upper and lower shells so as to prevent the grounding bar from being pulled backward in a core direction of the coaxial cable.
