Abstract (en)

The clamp has two symmetric curved segments (1) emerging from an upper edge of a built-in electrical mechanism's body close to two sides of a support base (3) of each jaw (4) of the mechanism. The segments are arranged in semi-circles projecting forward and extending by curved ends (5) that surround two arms (4a) of the corresponding jaw. The ends terminate very close to lateral walls of a front edge of the base.
