Abstract (en)
[origin: WO2005012067A1] The invention relates to a floor structure (1) for a modularly designed cab (2) of a utility vehicle. Said cab (2) substantially comprises a front wall module (3), a rear wall module (4), two sidewalls, and a roof element. The inventive floor structure (1) encompasses a first (5) and a second (6) bottom longitudinal beam that extend at a distance from each other in the longitudinal direction of the vehicle and have a smaller height in a forward section (7) forward being in relation to the direction of driving than in a rear section (8) which is provided with a cab floor (17). Said cab floor (17) essentially rests on the two bottom longitudinal beams (5, 6). The invention is characterized in that the forward section (7) of the first bottom longitudinal beam (5) is less long than the forward section (7') of the second bottom longitudinal beam (6').
