Abstract (en)
[origin: CA2436297A1] Collapsible container (1) for receiving food (2), having a flexible wall (6) comprising at least two layers (3, 4, 5), and a withdrawal opening (7) with a bent opening edge (8) and being closed at its end (9) opposite the withdrawal opening (7). The container is rolled from a two-dimensional blank (10) which is connected with itself in an overlap region (12) extending in particular in the longitudinal direction (11) of the container by means of heat and/or pressure. The container (1) is formed from a transparent and in particular liquid, preferably fluid tight material (13) which can be shaped in particular for bending the opening edge (8) and is dimensionally stable after the shaping.
