Abstract (en)
[origin: WO2005015146A1] A device for measuring forces and moments acting on a body comprises a measuring structure (12) made up of one or more elements and provided with a plurality of connection elements or bindings (17, 18, 37) for connecting the elements of the structure (12) and/or a body (11) the stress of which one wishes to measure, such a structure (12) being statically determined or else statically non determined, such a structure (12) also being equipped with means for measuring (14), in one or more locations, the six stress magnitudes from which the force vector and moment vector acting on the body (11) can be worked out mathematically.
