Abstract (en)
[origin: WO2004114173A2] The invention relates to a product protection system, whereby a product piece is provided with a product-specific identification sequence (K) which is converted into a coded check sequence (C), by means of an encoding method (F1) using a secret encoding sequence (B). A product control sequence (8) is applied to or on the product piece which comprises the coded check sequence (C), or a sequence derived therefrom. In order to check the authenticity of the product piece, the product control sequence is recorded by a control requester and transmitted by internet (10) to a product protection server structure (11). A decoded check sequence is derived therein from the product control sequence (8) by means of a decoding method (F2) using a decoding sequence (A). The authenticity of the decoded check sequence, or a sequence derived therefrom is checked and the result of the authenticity check transmitted by internet (10) to the control requester.
