Abstract (en)

[origin: WO2005011311A1] The invention relates to a method for transmission of a useful data object from an exchange component to a mobile station, whereby a communication network is selected in a first step, in which the useful data object is to be transmitted and the exchange component transmits the useful data object to the mobile station when it is determined in a second step that said mobile station is booked into said at least one communication network and it is determined in a third step that said exchange component has a delivery request for the useful data object. The invention further relates to a mobile station, an exchange component and a telecommunication device, each embodied such as to be able to carry out such a method.
