Abstract (en)
[origin: WO2005025275A1] The aim of the invention is to provide an effective possibility for the exterior illumination of a motor vehicle (12). For this purpose, organic light-emitting diodes are used on the body or are mounted from the exterior on the vehicle (12). In this manner, the need for providing openings for the lamp on the body such as are required for point light sources would be eliminated or the openings would be restricted to contact openings, thereby increasing the stability of the body and reducing the expenses for manufacturing and developing the body.
