Abstract (en)
[origin: EP1647338A1] The invention relates to a method for operating a system for sorting products in such a manner that individual collections of different products as specified on orders therefore are formed, as well as to such a system. The method comprises the steps of supplying different products to the sorting device, determining means determining the type of products that are to be supplied or have been supplied, order processing means processing orders for collections of different products, control means delivering control signals so as to have products delivered to discharge stations, the control means associating orders for collections of different products with respective discharge stations, so that products associated with a specific order will be delivered only to the associated discharge station, and the control means delivering control signals such that products of a particular type for a specific order will not be delivered to the associated discharge station until all products of another type for the order in question have been delivered to the associated discharge station.
