Abstract (en)

[origin: WO2005011793A1] The present finding relates to a catheter (1) for cerebral treatment with therapeutic radioactive substances including a proximal portion (2), an intermediate portion (3) and a distal portion (4), said distal portion (4) comprising an internal balloon (10) and an external balloon (11), characterised in that said internal (10) and external balloons (11) are made from a material which is impermeable to fluids. The invention also relates to a method for cerebral treatment with radioactive substances employing said catheter.
