Abstract (en)
[origin: WO2005010308A1] The invention relates to a strip-like connector element (1), between a frame component (11), for example, a window frame and masonry (12), whereby the connector element (1) may be bonded to the frame component (11) and/or masonry (12) and the connector element (1) comprises an extension reserve (R) which may be released. According to the invention, an improvement in resistance to mechanical loading, possibly caused by movement in the masonry and/or in the frame component may be achieved, whereby the multi-layer connector element (1) has a flexible elastic expansion film (2) at least in a part of the width thereof and a further rigid layer (3) is connected to the flexible expansion film (2) in divided sections (7).
