Abstract (en)

The device has a vibration plate (1) coupled over an elastic unit (2) in an intermediate unit (3) and the intermediate unit coupled at a base plate (5), a base frame or a base housing by an elastic unit (4). The unit (3) rests on a support in an operational state of the device and has a basic layout similar to that of the vibrating plate. A shaft that carries a weight is rotatably mounted and directly coupled to the vibrating plate.
