Abstract (en)

A device to obtain a bevel S along an edge of a plate (L) of glass, marble, stone or ceramic materials and the like, wherein such edge is defined between a face and a side rim (2) of the plate (L), including means to feed a plate (L) to be worked and means carried by a fixed structure (4) for performing a bevel along an edge of the plate (L) during the advancing of the plate. Such means for performing the bevel are adjustable in position through an oscillation around an axis (7), parallel to said edge, and with respect to said fixed structure (4) for performing bevels with changeable slants.
