Abstract (en)

[origin: EP1650050A2] The device has a firing pin supplied with compressed air and adjustably arranged in a tubular housing. A valve closes and releases compressed air supply to an embossing machine in alternate manner. A valve actuator (23) has an external hand contact unit that is prestressed in a resting position in which the valve is closed and is arranged to arrive into an open position in which the valve is opened when gripping the machine with hand. An independent claim is also included for an embossing machine comprising a device for supplying compressed air.
