Abstract (en)

[origin: EP1650350A1] The present invention refers to an automatic cylindrical transit-dissuading column (1) that moves automatically and hydraulically. Besides, column (1) is remote-controlled. This system comprises a cylindrical element (4) that can rise from the road paving in order to prevent the transit of vehicles in areas such as parking-places, cycle-tracks, building entrances, etc. The cylindrical element (4) can lower with a vertical movement and disappear completely so that the transit is made possible and vehicles are free to pass through.
