Abstract (en)

The cap (3) has a support part cooperating with an inner section of an end of a protective shield (1) and prolonged by a round part (3b). The round part is terminated with a squared doubling attachment (3c) that transversally delimits a U shaped section having two lateral wings (3c2, 3c3). The wing (3c2) cooperates with assembling units (4) engaged in holes of the support part in order to be fixed to the shield.
