Abstract (en)
It consists of an arm part (1) that has a tubular element (2) with a front perimeter edge (3) in at least one end, and a securing part (4), which includes a securing configuration (5), a connection configuration (6) and a perimeter surface (7) around said connection configuration (6). The front perimeter edge (3) and the perimeter surface (7) are orientated according to a transversal plane that is inclined with respect to a central longitudinal line (L) of the arm part (1). The connection configuration (6) is plugged into the hollow interior of the end of the arm part (1) and the front perimeter edge (3) of the arm part (1) is supported against the perimeter surface (7) of the securing part (4). The articulated arm for an awning is made up of such arm elements.
