Abstract (en)
[origin: DE102004041303A1] The container has circular openings to which connectors (20) are positioned and fastened by soldering. The connectors are formed in hollow cylindrical shape. Each connector is formed with an outside diameter corresponding to the diameter of each circular opening, such that the connector can be rotated for positioning in the circular opening and held in the circular opening after position adjustment. An independent claim is included for the heat exchanger.
