Abstract (en)
The system has a power-supply unit (101) inductively providing energy for supply of a sensor arrangement (110) of a cutting machine tool out of magnetic alternating field. The energy supplying the field is operated at an operating point that is optimal for transmission. A generating unit for the magnetic alternating field comprises a pair of coils. An outer field coil and the coils are arranged in parallel to each other. An independent claim is also included for a cutting machine tool with a sensor system.
