Abstract (en)

The system has two electronic maintenance devices (1, 2) designed for remote conversation via a telecommunication network (3) such that the device (2) permits to perform remote maintenance of an electronic equipment of a vehicle, in local communication with the device (1). The remote maintenance is performed with the help of a maintenance program corresponding to the equipment, where the program is stored in a memory of the device (1). An independent claim is also included for a method of maintenance of an electronic equipment of a vehicle.
