Abstract (en)  
[origin: FR2858539A1] The broom has a brush (10) with bristles (15-19) carried on a lower support surface (6) of a base (9) for sweeping the ground. The brush has a covered area limited by a border formed by a row of peripheral bristles (16) with rigidity lower than the central bristles (15). The bristles extend to a common plane of a free end inclined with respect to a plane of the surface for providing maximum gap between the peripheral bristles.
