Abstract (en)

[origin: WO2005035233A1] The invention relates to a control for a machine for producing paper padding material. The machine comprises a drive motor which transports sheets of paper through a shaping device. In this shaping device, the sheets of paper are shaped to paper padding material which is then cut to the desired length in a cutting device. The inventive control allows for an automatic memorization of a manually selected storage length.
