Abstract (en)
[origin: WO2005012015A1] The invention relates to a blind arrangement for the window of a motor vehicle, said arrangement comprising a blind that can be wound onto a winding element and wound off the winding element such that it extends in front of the window, two long guiding rails that are interspaced transversally in relation to the extension direction thereof and extend on both sides of the blind, and two sliders that are arranged in one of the two long guiding rails in a longitudinally displaceable manner and are used to guide the blind during the unwinding in such a way that it extends in front of the window after the unwinding. According to the invention, a lever element (33, 34) is mounted on each slider in an articulated, freely pivotable manner, said lever element also being connected to the blind (6).
