Abstract (en)
[origin: WO2005012130A1] The invention relates to a crate comprising multiple cavities for containers such as e.g. yoghurt pots or similar. Said crate is created by folding a flat blank (1) and comprises a base (2) and an upper part (3) that extends upwards from the blank plane and is provided with individual, at least partially delimited cavities (6) for inserting the containers. The aim of the invention is to provide a novel crate of this type comprising multiple cavities, which guarantees significantly increased rigidity with an optimum utilisation of material and production processes. To achieve this, a stabilising strut (7), which connects the base (2) to the upper part (3), is provided between at least two rows of cavities (6).
