Abstract (en)

[origin: WO2005012131A2] The invention relates to a dessicative container made of thermoplastic polymer material for packaging products which are sensitive to a moist environment in forms which are shaped or not. The dessicative container comprises a tubular envelope (1) which is closed at one of the ends thereof by a bottom (2) and which is open at the other end (3), a means (4) for closing the open end thereof i.e. a cover cap whereby the architecture thereof creates four successive tight peripheral barriers with the tubular envelope, a means (5) for linking the tubular envelope (1) and the cover cap (4) in the form of a mechanical hinge which can preferably be dismounted.
