Abstract (en)
[origin: WO2005018043A1] The invention relates to an improved antenna array which comprises the following features: the at least two radiator groups (3.1, 3.2) are arranged and/or fed in such a manner that the main lobe (7.1) of the first radiator device (3.1) and the main lobe (7.2) of the second radiator device (3.2) form an angle (α); - the array is provided with a network (13) via which a signal is supplied to the first radiator group (3.1) and the second radiator group (3.2) the intensity of which signal relative to each other can be adjusted, thereby adjusting a different angle radiation transmission (α) of the antenna array.
