Abstract (en)
[origin: EP1652556A1] An exerciser includes a base, a parallelogrammic supporting device rotatably supported on the base, to allow the supporting device to be rotated and adjusted relative to the base to selected angular position, a seat device is disposed on the supporting device and adjustable relative to the base to selected position. The seat device includes a handle, an actuator coupled between the supporting device and the base, to adjustably support the supporting device and the seat device to the base. A hand grip is pivotally attached to the handle, and coupled to the actuator, to control the actuator, and to allow the users to operate the actuator without departing the seat device.
