Abstract (en)

[origin: EP1652559A1] The device has a base (1) comprising a bar (3) with a toothed part (6) cooperating with a complementary toothed part (16) of a unit (15) integrated to a gliding board. The bar has one degree of freedom and an end (7) contacting a bent part of a rotating crank (8) connected to a lever (9), so that one position of the lever corresponds to a low position of the part (6) and another position corresponds to a high position of the part (6). The toothed part (6) is positioned at a central zone of the base. Independent claims are also included for the following: (A) a ski binding heelpiece comprising a device for its longitudinal fastening on a gliding board (B) a ski comprising a ski binding heelpiece fastening device.
