Abstract (en)

The bottle has a neck (1) and an orifice acorn (2) that is attached to the neck. A set of cognitive features (3) are provided in the bottle for recognition of type of bottle. The cognitive features are provided at the orifice acorn or in a region of the neck adjoining the orifice acorn. The cognitive features are designed such that the features are provided with a uniformly revolving sample. An independent claim is also included for a method for recognizing a type of the bottle.
