Abstract (en)

A tool display rack includes a main body (21), a mounting portion (211) mounted on the main body to allow passage of the drive stud (110) of the tool (10) and having a peripheral wall provided with a plurality of elastic locking portions (212) urged on a peripheral wall of the drive stud (110), and a pressing member (22) pivotally mounted on the main body and urged on the neck portion (12). Thus, the locking portions (212) are urged on the peripheral wall of the drive stud of the tool to retain the drive stud of the tool in the retaining portions closely, so that the drive stud of the tool is secured on the mounting portion of the tool display rack rigidly and stably.
