Abstract (en)
[origin: EP1652977A2] A thread mass of a trellis includes coils arranged on each of a tube (7) and a disk (8). A pressing roller (9) contacts the disk. Values for the roller length of the thread mass and the revolutions of the tube and disk are determined. The determined values are compared with desired values and the pressing power of the pressing roller is compensated. An independent claim is also included for a warping device.
