Abstract (en)

[origin: EP1653028A1] There is described a safety control device (1) for a vehicle lock (2), having a control member (13) which interacts with actuating means (7) of the lock (2), and can be set to at least two operating positions (\pm ,²) respectively enabling and disabling release of the lock (2); drive means (11) activated selectively to move the control member (13) into the operating positions (\pm ,²); and motion transmission means (12) interposed between the control member (13) and the drive means (11), and which have at least two actuating members (16, 17) for moving the control member (13) respectively from one to the other of the operating positions (\pm ,²) and vice versa; each actuating member (16, 17) is movable along a predetermined path including an interacting portion, in which the actuating member (16, 17) engages the control member (13) to move it between the operating positions (\pm ,²), and an idle portion, in which the actuating member (16, 17) is detached from the control member (13).
