Abstract (en)

The method involves providing an electrical connector comprising a central contact that is provided with crimping portions. An insulating body has a bearing portion (20) including a side wall. The central contact is crimped onto a central conductor using a crimping tool, where a depth of a cavity in the tool is sufficient to ensure that at the end of a crimping stroke, the bearing portion is engaged in a part in the cavity. An independent claim is also included for an electrical connector for mounting on a coaxial cable.
