Abstract (en)
First (12) and second (14) cable storage bodies have a gap. Designed as a clamp, a retaining device (30) holds cables in the gap and, when clamped, forms cable areas open in the longitudinal direction of the cables. A clamp has a locking part and a base block pressed by a spring in a first direction vertical to the longitudinal direction of the cables. An independent claim is also included for a method for storing cables or cable ends.
