Abstract (en)

[origin: WO2005016646A1] The invention relates to an offset rotary press comprising a plurality of printing units that contain form (11) and transfer cylinders (9) for first printing and perfecting, said printing units having a respective defined running direction. In each of said printing units, the circumference of the plate cylinder (11) corresponds to a page to be printed. At least five of said printing units are provided one above the other in a printing tower (02, 03, 04), which comprises guide elements (12) for simultaneously guiding a first web of printing material (19.1 to 19.8) through a first group and a second web of printing material (19.1 to 19.8) through a second group of said printing units.
