Abstract (en)

[origin: FR2857744A1] The needle has a light source (13) with a support made of flexible material having a part (30) covered with a photophore substance that is subjected to an electrical voltage from a supply source. The substance is electrically connected to the source by a flexible electrical connection formed by a part (30) of the support serving as a substrate with two conductors (31, 32). The conductors are in contact with respective pins.
