Abstract (en)

[origin: WO2005015691A1] The invention relates to a cable support device for fixing a plurality of feed cables in switchgear, especially in switchgear (S) that comprises a power switch panel. The cable support device comprises a base plate (G) having a cable clamping surface (FG). A first clamping plate (M1) comprises a clamping surface (FM1) that is substantially identical with that of the base plate (G). The first clamping plate (M1) can be linked with the base plate (G) by means of at least two bolts (B1, B2) in such a manner that the feed cables (L1, L2, L3, L4) led between the clamping surfaces (FG, FM1) of the base and clamping plate are arranged and fixated in parallel, thereby relieving the strain on the cables.
