Abstract (en)
The stand has a flat form (2) cut into a material plate and including folds (3A`-3D`) that traverse the flat form and define two adjacent walls which are folded for assembling the stand. A multilayer material includes a polyethylene core disposed between two aluminum layers. The folds are formed by a groove disposed in the multilayer material. A locking unit of one wall cooperates with another wall to maintain the stand. Independent claims are also included for the following: (A) a brochure holder including a locking unit (B) a sheet holder including a locking unit (C) a method for fabricating a display stand.
